Technical Data Sheet
va-Q-vip Floor

Product Description

va-Q-vip Floor is a laminated microporous insulation material based on fumed silica and is approved for general construction purposes in accordance with approval number Z-23.11-1658 of the "Deutsches Institut für Bautechnik (DIBT)". The insulation panel is provided with a 3mm protective layer of rubber granulate on one side and a 17 mm PIR layer on the other side. va-Q-vip Floor elements are unique because of their rectangular edges and corners (va-Q-seam) whereas individual elements can be joined together almost seamlessly. In general rectangular panels are produced but various shapes (trapeze, triangle, corner section) are possible on request. The va-Q-vip F can be used in buildings according to the application areas DAD, DAA and DEO according to DIN 4108-10, table 1 (floors, flat roofs, ceilings, top floor ceilings).

Features

- **Enhanced usable room area due to thinner insulation material**
- **Smooth edges and no foil overlaps due to patented va-Q-seam technology**
- **Various standard sizes on stock**
- Approved for general construction purposes according to Z-23.11-1658
- Long lifetime due to optimized panel design with fumed silica
- 100 % quality control with the patented gas pressure measurement system (va-Q-check)
- Sustainable product (recyclable core material)

Testing standards

Our va-Q-vip F panels are subjected to the according to internal test methods to confirm their exceptional properties:

- Accelerated aging tests at 50 °C, 70 % relative humidity and 80 °C (dry)
- Thermal conductivity measurements λ(T), λ(p) according to DIN EN 12667
- Long-time monitoring at room conditions (p(t), λ(t))
- Fire protection test according to DIN 4102-1 / EN 11925-2
- Measurement of the length- and point-related heat transition coefficient (thermal bridge effect, Ψ-value)
